

NARESH ARAVINDHAN N

Cloud / DevOps Engineer

Chennai, Tamil Nadu | naresh.aravind.310305@gmail.com | +91-7904323070 | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Entry-level Cloud/DevOps Engineer with a B.E. in Computer Science Engineering (IoT) and hands-on project experience deploying and automating infrastructure on AWS. Skilled in provisioning cloud resources, containerizing applications with Docker, building CI/CD pipelines with Jenkins, GitHub Actions, and Amazon ECR, and managing infrastructure as code with Terraform. AWS Cloud Practitioner certified, with strong Linux administration and scripting fundamentals.

TECHNICAL SKILLS

Cloud Platforms (AWS): EC2, S3, IAM, VPC, Security Groups, EBS, ALB, ECR, CloudWatch

CI/CD Tools: Jenkins, GitHub Actions

Containerization: Docker, Docker Compose, Amazon ECR

Infrastructure as Code: Terraform (init, plan, apply workflow)

Operating Systems: Linux, RHEL, SSH, Apache, Nginx

Networking: VPC, Subnets, DNS, HTTP/HTTPS, Load Balancing

Scripting & Version Control: Python, Bash, Git, GitHub

CERTIFICATIONS

- AWS Cloud Practitioner Essentials — AWS Training & Certification (August 2026)
- Cloud Computing Fundamentals — IBM SkillsBuild (August 2026)

PROJECTS

AWS DevOps CI/CD Pipeline with Jenkins, Docker, ECR & Terraform

- Built an end-to-end CI/CD pipeline integrating GitHub, Jenkins, Docker, and Amazon ECR to automate containerized application deployment on AWS EC2, reducing a 6-step manual deployment process to a single Jenkins-triggered workflow.
- Provisioned supporting AWS infrastructure with Terraform and configured IAM-based authentication for Jenkins-to-ECR access, resolving an initial credential failure and validating the pipeline across 8+ successful builds with zero downtime during container replacement.

AWS Application Load Balancer with EC2 and S3

- Deployed a static website across 2 EC2 instances in separate Availability Zones behind an Application Load Balancer, achieving 100% availability during simulated instance failure with failover in under 60 seconds.
- Configured a private S3 bucket with a least-privilege IAM role for EC2 read-only access, and set up security groups, Apache web servers, and target-group health checks to validate failover.

Static Website Hosting on AWS EC2

- Launched and configured an EC2 instance with custom security group rules, SSH access, and an attached EBS volume, completing core setup in approximately 15 minutes.
- Installed and configured Apache/Nginx on RHEL Linux to host a static website through the EC2 public endpoint, with typical page response under 1 second in the test environment.

Dockerized Food Ordering Application

- Containerized a food ordering web application using Docker, reducing environment setup from approximately 20 minutes to under 2 minutes.
- Configured Docker Compose to run the application consistently via a single workflow; published on port 5000 with container startup in approximately 10 seconds.

Infrastructure Automation using Terraform

- Provisioned AWS EC2 and networking/security resources using Terraform, reducing repeat provisioning time from approximately 30 minutes to under 5 minutes.
- Practiced the init-plan-apply Terraform workflow across 3+ iterations, maintaining version-controlled configurations in Git for repeatable, recoverable infrastructure changes.

LEADERSHIP & ACTIVITIES

- Served as Overall Event Coordinator for the college symposium at Paavai Engineering College, Namakkal, and coordinated a blood donation camp — organizing logistics and participant support for both.

EDUCATION

B.E. Computer Science and Engineering (Internet of Things)

2022 – 2026

Paavai Engineering College, Namakkal, Tamil Nadu | CGPA: 7.54 / 10
